附录7　主要统计指标解释

1.地区生产总值　指一个国家（地区）所有常住单位在一定时期内生产活动的最终成果。国内生产总值有三种表现形态，即价值形态、收入形态和产品形态。从价值形态看，它是所有常住单位在一定时期内所生产的全部货物和服务价值超过同期投入的全部非固定资产货物和服务价值的差额，即所有常住单位的增加值之和；从收入形态看，它是所有常住单位在一定时期内所创造并分配给常住单位和非常住单位的初次分配收入之和；从产品形态看，它是最终使用的货物和服务减去进口货物和服务。在实际核算中，国内生产总值的三种表现形态表现为三种计算方法，即生产法、收入法和支出法。三种方法分别从不同的方面反映地区生产总值及其构成。

支出法国内生产总值　指一个国家所有常住单位在一定时期内用于最终消费、资本形成总额，以及货物和服务的净出口总额，它反映本期生产总值的使用及构成。对于地区，名称为“支出法地区生产总值”。

最终消费　指常住单位在一定时期内对于货物和服务的全部最终消费支出，也就是常住单位为满足物质、文化和精神生活的需要，从本国经济领土和国外购买的货物和服务的支出；不包括非常住单位在本国经济领土内的消费支出。最终消费分为居民消费和政府消费。

居民消费　指常住住户对货物和服务的全部最终消费支出。居民消费按市场价格计算，即按居民支付的购买者价格计算。购买者价格是购买者取得货物所支付的价格，包括购买者支付的运输和商业费用。居民消费除了直接以货币形式购买货物和服务的消费之外，还包括以其他方式获得的货物和服务的消费支出，即所谓的虚拟消费支出。居民虚拟消费支出包括以下几种类型：单位以实物报酬及实物转移的形式提供给劳动者的货物和服务；住户生产并由本住户消费了的货物和服务，其中的服务仅指住户的自有住房服务；金融机构提供的金融媒介服务；保险公司提供的保险服务。

政府消费　指政府部门为全社会提供公共服务的消费支出和免费或以较低价格向住户提供的货物和服务的净支出。前者等于政府服务的产出价值减去政府单位所获得的经营收入的价值，政府服务的产出价值等于它的经常性业务支出加上固定资产折旧；后者等于政府部门免费或以较低价格向住户提供的货物和服务的市场价值减去向住户收取的价值。

资本形成总额　指常住单位在一定时期内获得的减去处置的固定资产加存货的变动，包括固定资本形成总额和存货增加。

固定资本形成总额　指常住单位购置、转入和自产自用的固定资产，扣除固定资产的销售和转出后的价值，分有形固定资产形成总额和无形固定资产形成总额。有形固定资产形成总额包括一定时期内完成的建筑工程、安装工程和设备工器具购置（减处置）价值，以及土地改良、新增役、种、奶、毛、娱乐用牲畜和新增经济林木价值。无形固定资产形成总额包括矿藏的勘探、计算机软件、娱乐和文学艺术品原件等获得减处置。

存货增加　指常住单位存货实物量变动的市场价值，即期末价值减期初价值的差额。存货增加可以是正值，也可以是负值；正值表示存货上升，负值表示存货下降。它包括生产单位购进的原材料、燃料和储备物资等存货，以及生产单位生产的产成品、在制品等存货等。

货物和服务净出口　指货物和服务出口减货物和服务进口的差额。出口包括常住单位向非常住单位出售或无偿转让的各种货物和服务的价值；进口包括常住单位从非常住单位购买或无偿得到的各种货物和服务的价值。由于服务活动的提供与使用同时发生，因此服务的进出口业务并不发生出入境现象，一般把常住单位从国外得到的服务作为进口，非常住单位从本国得到的服务作为出口。货物的出口和进口都按离岸价格计算。

2.可比价格　指对不同时期的价值进行对比时，扣除了价格变动的因素，以确切反映物量的变化情况。按可比价格计算的方法有两种：一是直接按产品产量乘不变价格计算；二是用物价指数换算。

3.不变价格　指以同类产品某年的平均价格作为固定价格，用于计算各年的产品价值。按不变价格计算的产品价值消除了价格变动因素，不同时期对比可以反映生产的发展速度。新中国成立后，随着工农业产品价格水平的变化，国家统计局先后六次制定了全国统一的工业产品不变价格和农业产品不变价格。从1952年到1957年使用1952年工（农）业产品不变价格，从1957年到1970年使用1957年不变价格，从1971年到1980年使用1970年不变价格，从1981年到1990年使用1980年不变价格，从1991年到2000年使用1990年不变价格，从2001年到2005年使用2000年不变价格，从2006年到2010年使用2005年不变价格，从2010年到2015年使用2010年不变价格，从2016年到2020年使用2015年不变价格，目前使用的是2020年不变价格。

4.各个计划时期　各个计划“时期”代表的年份如下：恢复时期为1950-1952年；第一个五年计划时期（简称“一五”时期）为1953-1957年；第二个五年计划时期（简称“二五”时期）为1958-1962年；调整时期为1963-1965年；第三个五年计划时期（简称“三五”时期）为1966-1970年；第四个五年计划时期（简称“四五”时期）为1971-1975年；第五个五年计划时期（简称“五五”时期）为1976-1980年；第六个五年计划时期（简称“六五”时期）为1981-1985年；第七个五年计划时期（简称“七五”时期）为1986-1990年；第八个五年计划时期（简称“八五”时期）为1991-1995年；第九个五年计划时期（简称“九五”时期）为1996-2000年；第十个五年计划时期（简称“十五”时期）为2001-2005年；第十一个五年计划时期（简称“十一五”时期）为2006-2010年；第十二个五年计划时期（简称“十二五”时期）为2011-2015年；第十三个五年计划时期（简称“十三五”时期）为2016-2020年。

5.平均增长速度　指某种现象在一个较长时期中逐年增长的平均速度。其计算方法有两种：一是习惯上经常使用的“水平法”，又称几何水平法，是以间隔期最后一年的水平同基期水平对比来计算平均每年增长（或下降）速度；二是“累计法”，又称代数平均法或方程法，是以间隔期内各年水平的总和同基期水平对比来计算平均每年增长（或下降）速度。在一般正常情况下，两种方法计算的数值比较接

近，但在经济发展不平衡，出现大起大落时，该两个数值差别较大，

本《年鉴》内所列的平均每年的增长速度，均用“水平法”计算。从某年到某年平均每年增长速度的年份，均不包括基期年在内。如改革开放35年以来的平均每年增长速度是以1978年为基期计算的，则写为1979-2013年平均每年增长速度，其余类推，

APPENDIX 7 EXPLANATORY NOTES ON MAIN STATISTICAL INDICATORS

1 Gross Domestic Product (GDP) refers to the final products of all resident units in a country (or a region) during a certain period of time. Gross domestic product is expressed in three different forms, i.e. value, income, and products respectively. The form of value refers to the total value of all products and services produced by all resident units during a certain period of time minus total value of intimidate input of materials and services of the nature of non-fixed assets or the summation of the value-added of all resident units; the form of income includes all the income created by all resident units and distributed primarily to all resident and non-resident units; the form of products refers to the value of all final goods and services for final use by all resident units plus the value of net exports of goods and services during a given period of time. In the practice of national accounting, gross domestic product is calculated with three approaches, i.e. production approach, income approach, and expenditure approach, which reflect gross domestic product and its composition from different aspects.

GDP Calculated with Expenditure Approach refers to total expenditure on final consumption, total capital formation and net export of goods and services by resident units of a country in a certain period of time. It reflects the composition of GDP by its use.

Final Consumption refers to the total expenditure of resident units on final consumption of goods and services in a certain period, namely the expenditure of the resident units for purchases of goods and services from domestic economic territory and abroad to meet the requirements of material, cultural and spiritual life. It excludes the expenditure of non-resident units on consumption in the economic territory of the country. The final consumption is classified into household consumption and government consumption.

Households Consumption refers to the total expenditure of resident households on the final consumption of goods and services. The household consumption is calculated at market prices, namely the purchasers prices which the households pay: the purchasers prices of goods are the prices the households pay when they obtain the goods, including the transport and commercial expenses paid by the households. In addition to the consumption of goods and services bought by the households directly with money. The expenditure on goods and services obtained by the households in other ways, i.e. the so-called imputed expenditure on consumption, is also included in the household consumption. The imputation expenditure of the households on consumption includes the following types: (a)the goods and services provided to the households by the units in the form of payment in kind and transfer in kind: b)the goods and services produced and consumed by the households themselves, in which the services refers only to the services provided by the residential buildings owned by the households: (c)the services of financial intermediary provided by the financial (d)the insurance services provided by the insurance companies.

Government Consumption refers to the expenditure on the consumption of the public services provided by the government to the whole society and the net expenditure on the goods and services provided by the government to the households at free charge or lower prices. The former equals to the output value of the government services minus the value of operating income obtained by the government departments. (The output value of the government services equals to its current operating expending plus depreciation of fixed assets). The latter equals to the market value of the goods and services provided by the government free of charge or at low prices to the households minus the value received by the government from the households.

Total Capital Formation refers to the fixed assets acquired minus those disposed and the change in inventory, including the total fixed assets formation and the increase in inventory.

Total Fixed Capital Formation refers to the value of fixed assets purchased, transferred in by the resident units and those produced and used by themselves deducting the value of fixed assets sold and transferred out. It can be classified into total tangible assets formation and total intangible assets formation. The total tangible assets formation include the value of the construction projects, installation projects completed and the equipment, apparatus and instruments purchased as well as the value of land improved, the value of draught animals, breeding stock, milk, wool and recreational animals and newly increased economic forest in a certain period. The total intangible assets formation includes the prospecting of minerals, the acquisition of computer software , the originals of recreational works and works of literature and arts minus the disposal of them Increase in Inventory refers to the market value of the change in inventory, i.e. the difference of value between the beginning and the end of the period. The increase in in inventory can be positive or negative. A positive value indicates the increase in inventory while a negative value indicates the decrease in stock. The inventory includes the raw materials ,fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products, work in progress, etc.

Increase in Inventory refers to the market value of the change in inventory, i. e. The difference of value between the beginning and the end of the period. The increase in inventory can be positive or negative. A positive value indicates the increase

in inventory while a negative value indicates the decrease in stock. The inventory includes the materials, fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products, work-in-progress, etc.

Net Export of Goods and Services refers to the difference of the exports of goods and services minus the imports of goods and the services. The imports include the value of various goods and services sold or gratuitously transferred by the resident units to the non-resident units. The imports include the value of various goods and services purchased or gratuitously acquired by the resident units from the non- resident units. Because the provision of services and the use of them happen simultaneously, the import and export of services do not appear to have the phenomena of crossing the border of the country. The acquisition of services by the resident units from abroad is usually treated as import while the acquisition of services by non-resident units in this country is usually treated as export. The export and import of goods are calculated at FOB.

2 Comparable Prices refers to prices that removed the factors of price change so as to exactly reflect the change of aggregate when comparing the value of different periods. Two methods are used for calculating comparable prices: 1. Multiplying the output of products by their fixed prices of certain year; 2. Converting prices by relevant price index.

3 Constant Price refers to the average price of a given product in certain year, which is used for comparison of output value over time. As the output value at constant prices removes the factor of price changes, it reflects the trend of production development over time. 5 Average Annual Growth Rate refers to the average growth rate year after year in a long period of time. There are two methods for calculating: one is "level approach", or the method of geometric level calculation, is the annual average growth (decrease) rate, which derived by comparing the level of the last year of the interval with that of the beginning year; the other is called "accumulative approach", or algebraic average or equation method, is the annual average growth (decrease) rate, which is derived by summation of the actual figure of each year in the interval divided by the figure in the base year. Usually, the results calculated by the two methods are fairly close, but they differed sharply when uneven economic development occurred with striking fluctuations in growth.

The average annual growth rates listed in this statistical yearbook are all calculated by "level approach". The base years are not listed when the years are listed for average annual growth rates. For example, the average annual growth rate of the 35 years since reform & opening-up implemented is listed as 1979-2013 without listing the base year 1978, the rest of the years are analogized as the same.

Mortality Rate is a metric that gauges the number of deaths within a particular region over a designated period, typically a year, relative to the average population (or mid-year population) for the same duration. This statistic is often expressed per thousand. The formula for computing the annual mortality rate is articulated as:

Mortality Rate=Number of Deaths in the Year / Average Population in the Year × 1000‰

Where:

Number of Deaths in the Year signifies the total count of deaths throughout the specified year. Average Population in the Year denotes the mean population at the commencement and conclusion of the year, or it can be approximated using the mid-year population.

22. Natural Population Growth Rate measures the rate at which a population increases or decreases due to natural factors (births and deaths) over a specified period, typically one year.
